

DigiGate-700™ Access Control System

Utilize the industry's most user friendly, Windows®-based software in combination with an exclusive array of reliable hardware to achieve your long-term access control and security goals.

Realize these benefits when using the DigiGate-700™ system:

Integration with Industry Management Software: Select the management software program that works best for you. Get the assurance that important tenant activity will be transferred to it from the DigiGate-700™ access control software. Digitech International, Inc.'s **Self Storage Software Connection***, ensures that your installation will be hassle-free and communication issues will be resolved quickly. There are no link charges when changing software vendors.

Single Computer Operation: Save office space by utilizing the DigiGate-700™ software in conjunction with other programs on the office computer.

Information Backup: The DigiGate-700™ system does not require a dedicated computer. All tenant information is stored on the DigiGate-700™ System Controller. If the computer fails, the DigiGate-700™ system continues its access control functions on current information

Flexible Management Capability: Automatically “lock out” tenants, control tailgaters, change access zones and run multiple reports with only a few mouse clicks. Unit numbers can be identified by any combination of alphanumeric characters and can be linked to multiple tenants. DigiGate-700™ Access Control Software is password protected and can also be easily configured to run multiple sites from a single headquarters location. Use multiple codes per unit or assign multiple units per code.

Multiple Hardware Options: Choose from our extensive inventory of attractive Keypads, Prox Readers, Magnetic Card readers and 26-bit Weigand devices to control access to gates, doors and elevators. The software can accommodate up to 64 keypad/time zones and 4000 alarm points. DigiGate-700™ Access Control System is listed and conforms to UL Standard 294 for access control systems.

*Go to www.digitech-intl.com for details and list of participating industry software vendors.

DigiGate-700™ System Controller

The System Controller is the information brain that monitors, stores and processes tenant activity. It is installed near the office computer and receives information from a variety of devices. As devices report activity, the software translates the data and either accepts or denies access.

Digitech™ Keypads and Readers

Digitech keypads are the most attractive, reliable, and durable keypads available to the access control industry. Heavy gauge, powder coated, stainless steel faceplates and touch-sensitive keypads allow all Digitech keypads to endure a wide range of environmental extremes. An engineering design featuring no moving parts ensures years of trouble free use.

Select from a variety of options that include:

Standard entry/exit keypad with built-in intercom capability.

A liquid crystal display screen that allows total customization of up to 64 messages, 20 characters on four separate lines.

Standard keypad enclosure utilizing a proximity reader.

LC keypad that contains both a proximity reader and keypad for both added security and flexibility.

Digitech™ Gate Systems

Digitech provides a wide range of gate options to meet the needs of your entry area and traffic pattern. Choose a gate operator with specially designed anti-tailgating features for locally fabricated slide gates, or choose customized configurations of vertical pivot and vertical lift and fold gates.

VLF Gate System

Digitech's Vertical Lift and Fold Gate is an attractive, easy-to-install gate that is built to last. The Digitech VLF is a complete gate system that ships ready to install, including the integrated operator, barrier, catch post, and controls. With an operator footprint of 12" x 20", it requires minimal space in the critical entry area.

Slide Gate Operator

A dependable heavy-duty motor control unit operates a chain drive to pull a gate up to thirty feet. The gate construction can be a slide or roll gate, a V-track gate, or a cantilever gate. The Digitech Slide Gate Operator features the most advanced technology found in today's manufacturing world. Designed for high traffic areas and high reliability, the Digitech™ Slide Gate Operator will meet the needs of even the most demanding installations.
